MCQs

1. **What is the purpose of the basic validation?**
    a) Data correctness
    b) Mere data existence
    c) Both Data correctness and Mere data existence
    d) Data modification

Answer: b
Explanation: The data entered through the server-side is used for validation. First of all, the form must be checked to make sure data was entered into each form field that required it. This would need just loop through each field in the form and check for data.

2. **The correct sequence of HTML tags for starting a webpage is –**

a. Head, Title, HTML, body
b. HTML, Body, Title, Head
c. HTML, Head, Title, Body
d. HTML, Head, Title, Body

Answer: (d) HTML, Head, Title, Body

Explanation: The correct sequence of HTML tags to start a webpage is html, head, title, and body.

3. **Which of the following tag is used to insert a line-break in HTML?**
    a.
    b. <a>
    c. <pre>
    d. <b>

Answer: (a)

Explanation: The <br> tag in the HTML document is used to create a line break in a text. If we place the <br> tag in HTML code, then it works the same as pressing the enter key in a word processor.

4. **How to insert an image in HTML?**

a.
b.
c.
d.

Answer: (d)

Explanation: The img tag and the src attribute is used to display an image on the webpage.
